

# Parkanon Listatehdas Oy

*Enemmän puusta.*

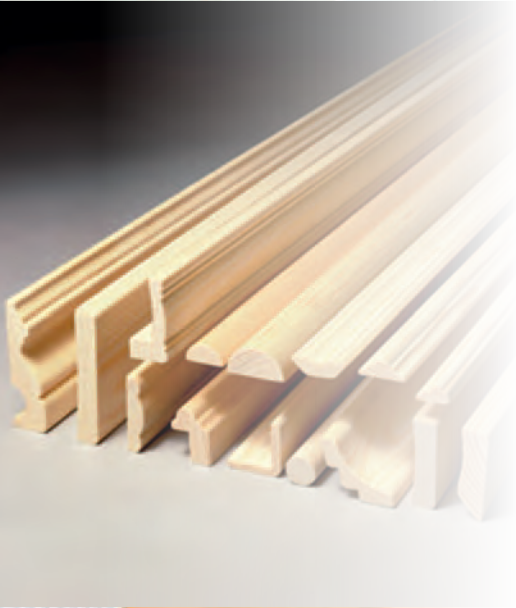

# *All our expertise at your disposal.*

Wood is a durable natural & renewable material which gives a feeling of warmth in your home and public premises.

We have been working with wood for decades. All of the time learning and experiencing something new.

During the decades our product range and manufacturing has been refined to what it is today, flexible, diverse, versatile and efficient. We continue to develop with our customers and customer demands guide us not just for today but in the future as well.

We place our long tradition, capable personnel and versatile manufacturing at your disposal.

# *Selection of choice*

Our production consists of wooden profiles for various uses for interior decoration and construction purposes as well as for joinery and woodworking industries. We also produce bespoke customer designed profiles for your project should they be required.

It is possible to manufacture products to suit your purposes exactly. Whether it concerns timber species, profile, surface treatments, lengths or packaging and identification marking. Our aim is in long-term cooperation.

A major part of working with us is our ability to further our product development in the form of a consultative cooperation with you. We constantly search for better optimal solutions in planed sections. A few millimeters change in material measurements can mean a significant improvement in competitiveness and profitability, both for us and you our customer.

# *Our attitude is customer driven.*

We value your trust in us, we promise to deliver so that your promise to your customer is exceeded.

We consider each and every single customer relationship as a unique and valuable chance to learn. Every relationship is a valuable challenge for us and we do all we can to earn and preserve your trust.

We promise you can concentrate to your own core business. Let us do our part. We deliver our promise.

# *More from wood.*

Sustainability guides us in our every action. Already general planning and material procurement is guided by the most appropriate economic activity, targeted to reducing any environmental impact.

Environmental aspects guide us in choosing partners as well. Our partners in supply chain act responsibly and actively seek better and more sustainable ways in their operations to reduce any impact to the environment.

End-uses of our products vary from the most demanding specialties to typical domestic and public uses - you can see our products in the meeting points of ceilings, walls and floors or in more individual indoor decorations. Maybe in your favorite restaurants, hotels, airports or for instance open sea cruisers. And new ideas to use wood are always welcomed!
